# Infrastructure

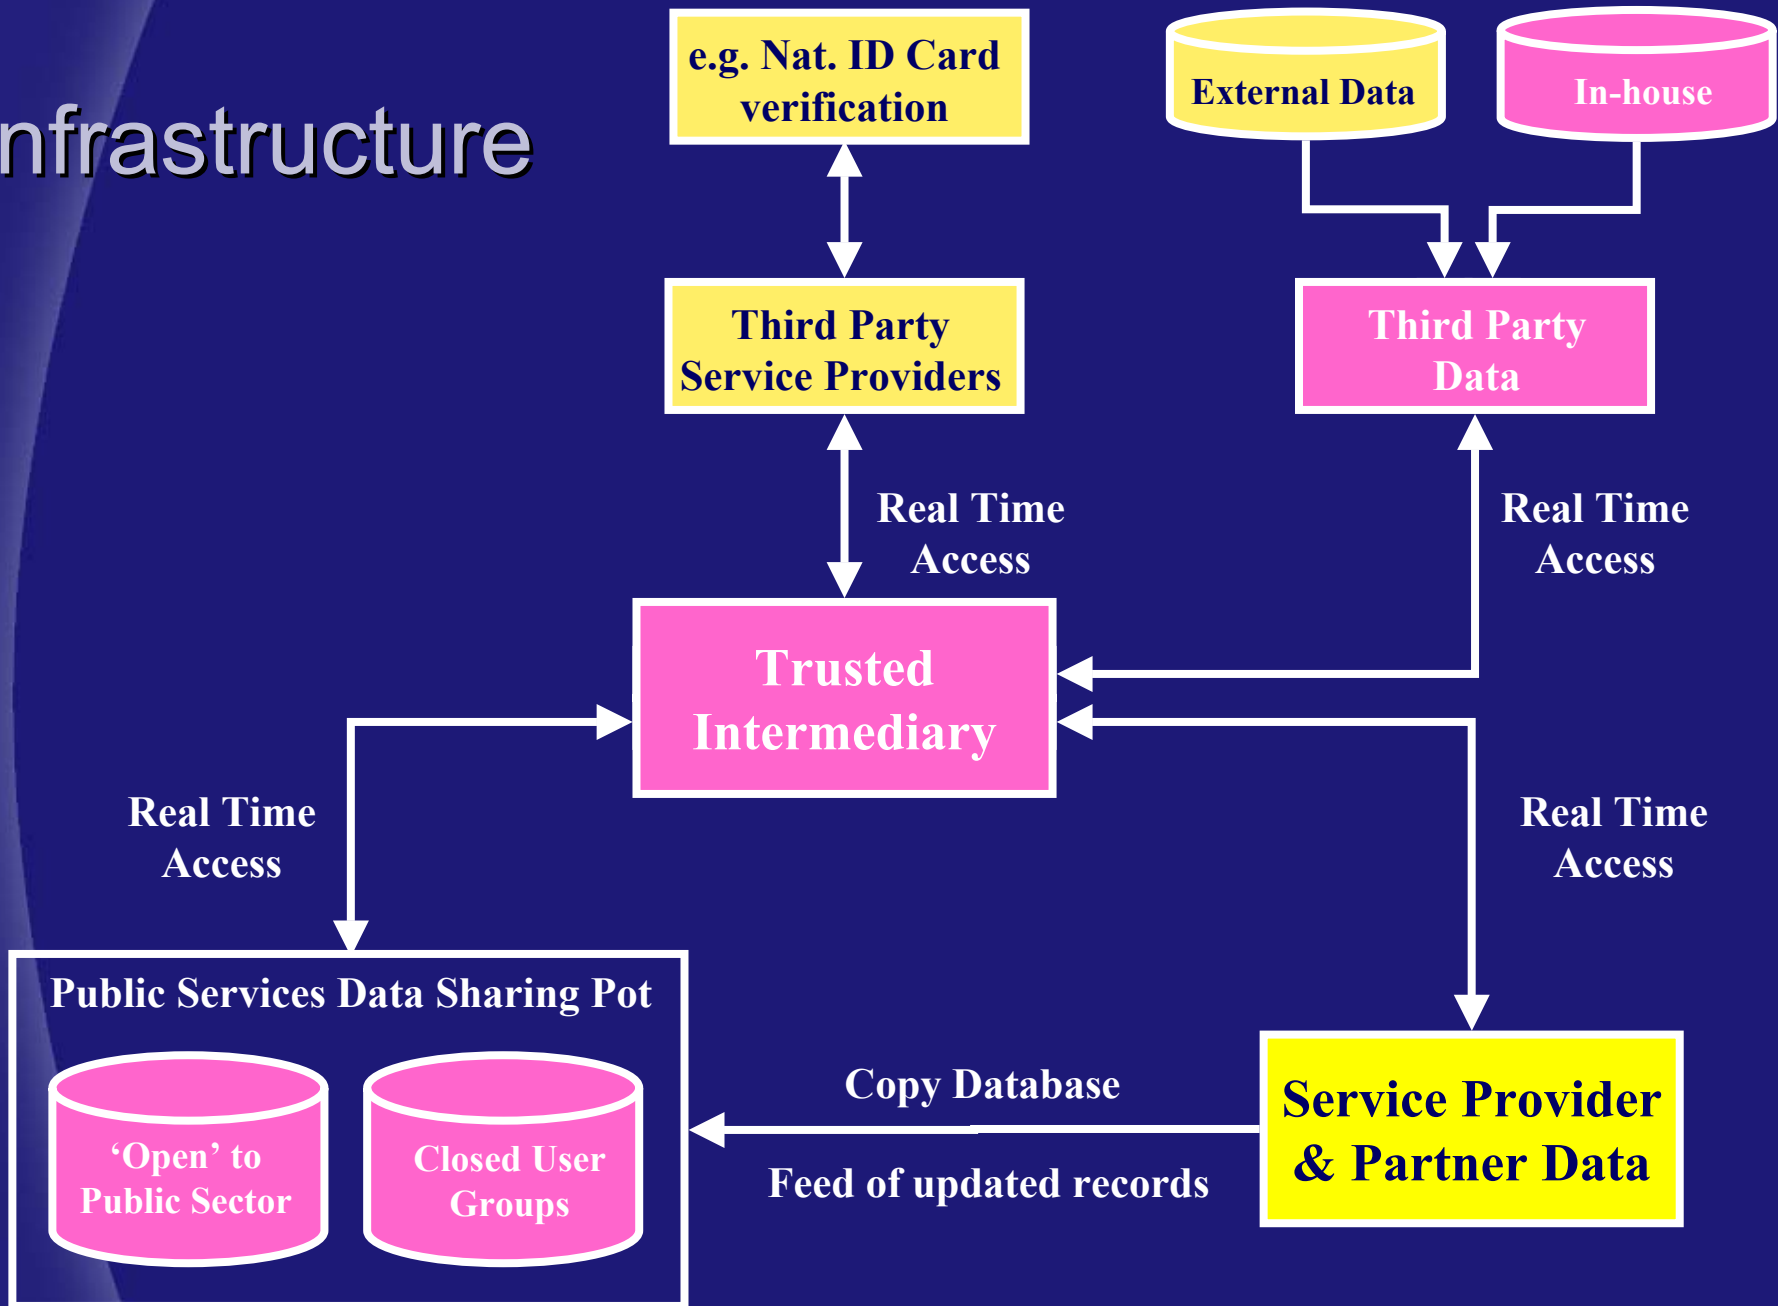

# Infrastructure

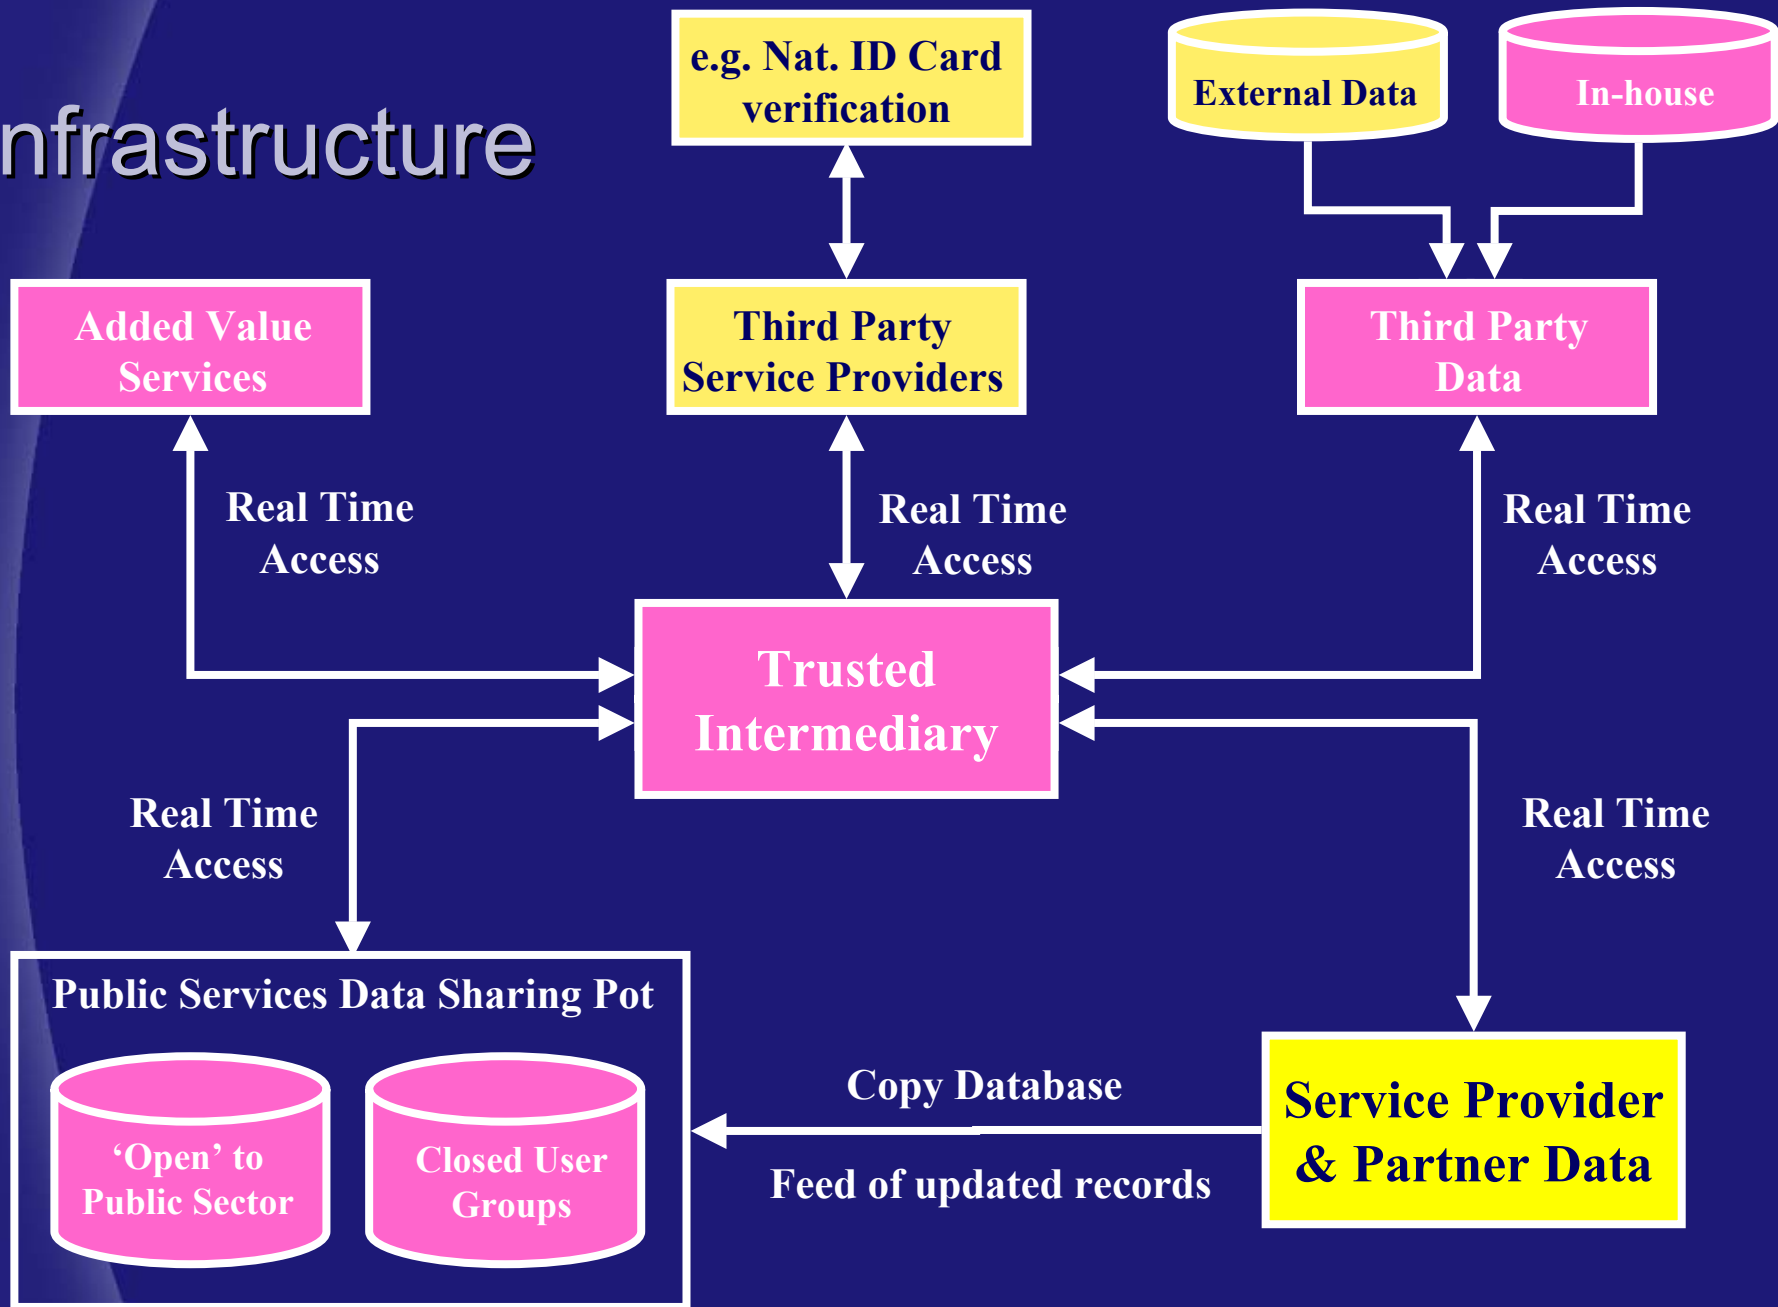

# Infrastructure

# Key considerations

- Benefits to the citizen
- Trust
- Data quality
- Governance
- Infrastructure
- Data Protection
- Legislation

# Benefits to the individual – why are we doing this?

- Quicker service
- Reduce the need to supply documents
- Contribution towards identity checking
- Contribution towards service eligibility assessment
- More convenient distribution channels
- Ability to take advantage of cost reductions reflected in pricing
- Proactive service offerings

# Trust

# Data Quality

- Accuracy
- Up to date
- Complete
- Formats
- Effective name and address matching routines

# Governance

- Membership - managing
- Data quality - policing
- Contribution - controlling level of data accessed
- Purpose - controlling amount of data accessed
  
- Citizen access
  - Individual's right to look at their data
  - Individual's right to know who has accessed their data.

# Infrastructure

- Minimise the financial risk - data contributors
- Undertake the quality control processes
- Receive, manage and maintain the shared data
- Manage the day to day operations
- Add value to the data
- Provide electronic access to the data being shared
- Support a range of distribution channels & technologies

# Infrastructure (cont.)

- Support the demands of response times
- Facilitate the assessment of the levels of trust
- Provide proactive notifications to individuals
- Provide individuals with access to their data

# Data Protection Issues

- A key issue will be to establish an acceptable and compliant method of allowing the appropriate data for sharing to be 'in place' prior to consent in order to allow the data to be immediately released when consent is given.

# Legislation

- In areas affected, remove legislative constraints that currently prevent individuals from initiating data sharing through their express consent
